Paper No(s)/Mail Date 6) Other:						

DETAILED ACTION

1. Claims 1-4 are pending.

Claim Objections

2. Claims 1-4 are objected to because of the following informalities: they are written in an outline format (a), b), etc.), and should be written in sentence form. Appropriate correction is required.

Double Patenting

- 3. Claims 1-4 of this application conflict with claims 1-4 of Application No. 10/415,153. 37 CFR 1.78(b) provides that when two or more applications filed by the same applicant contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention during pendency in more than one application. Applicant is required to either cancel the conflicting claims from all but one application or maintain a clear line of demarcation between the applications. See MPEP § 822.
- 4. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller*

v. Eagle Mfg. Co., 151 U.S. 186 (1894); In re Ockert, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

5. Claims 1-4 provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-4 of copending Application No. 10/415,153. This is a <u>provisional</u> double patenting rejection since the conflicting claims have not in fact been patented.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 1-4 are rejected under 35 U.S.C. § 103(a) as being unpatentable over Applicant Admitted Prior Art (AAPA), and further in view of Rogers et al. (U.S. 6,331,854).
- 8. As to claim 1, AAPA a method for improving interactive animation over a computer network having a client and a server (AAPA, page 1, lines 19-20), comprising: forming a queue of

Art Unit: 2155

server messages at the client; adding received server messages to the queue (AAPA, page 1, lines 25-27); calculating the minimum deadline of the server messages in the queue (AAPA, page 1, lines 25-26). But AAPA does not expressly disclose calculating the time to play animations or accelerating the animation if it will take longer to play than the server messages. However, Rogers does teach calculating the time required to play all the currently queued animations (Rogers, col. 7, lines 26-30); and if the time required to play all the currently queued animations is greater than the minimum deadline of the server messages in the queue, accelerating the animation (Rogers, col. 8, lines 22-37). It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine AAPA and Rogers in order to alleviate delays in animation processing (Rogers, col. 1, lines 56-60).

9. As to claim 2, the combination of AAPA and Rogers (AAPA-Rogers) discloses a method for improving interactive animation over a computer network between first and second clients (AAPA, page 1, lines 21-22), comprising: forming a queue of messages from the first client at the second client; adding messages received from the first client to the queue at the second client (AAPA, page 1, lines 25-27); calculating the minimum deadline of the messages in the queue (AAPA, page 1, lines 25-26); calculating the time required to play all the currently queued animations (Rogers, col. 7, lines 26-30); and if the time required to play all the currently queued animations is greater than the minimum deadline of the messages in the queue, accelerating the animation (Rogers, col. 8, lines 22-37).

Art Unit: 2155

- 10. As to claim 3, AAPA-Rogers discloses a computer program product for improving interactive animation over a computer network having a client and a server (AAPA, page 1, lines 19-20), the computer program product comprising: a computer usable medium having computer readable program code means embodied in the medium for forming a queue of messages from the first client at the second client; the computer usable medium having computer readable program code means embodied in the medium, adding received server messages to the queue (AAPA, page 1, lines 25-27); the computer usable medium having computer readable program code means embodied in the medium for calculating the minimum deadline of the server messages in the queue (AAPA, page 1, lines 25-26); the computer usable medium having computer readable program code means embodied in the medium for calculating the time required to play all the currently queued animations (Rogers, col. 7, lines 26-30); and the computer usable medium having computer readable program code means embodied in the medium for determining if the time required to play all the currently queued animations is greater than the minimum deadline of the server messages in the queue, and if it is, accelerating the animation (Rogers, col. 8, lines 22-37).
- 11. As to claim 4, AAPA-Rogers discloses a computer program product for improving interactive animation over a computer network between a first client and a second client (AAPA, page 1, lines 20-21), the computer program product comprising: a computer usable medium having computer readable program code means embodied in the medium for forming a queue of server messages at the client; the computer usable medium having computer readable program code means embodied in the medium, adding received from the

Application/Control Number: 09/978,082

first client messages to the queue at the second client (AAPA, page 1, lines 25-27); the computer usable medium having computer readable program code means embodied in the medium for calculating the minimum deadline of the messages in the queue (AAPA, page 1, lines 25-26); the computer usable medium having computer readable program code means embodied in the medium for calculating the time required to play all the currently queued animations (Rogers, col. 7, lines 26-30); and the computer usable medium having computer readable program code means embodied in the medium for determining if the time required to play all the currently queued animations is greater than the minimum deadline of the messages in the queue, and if it is, accelerating the animation (Rogers, col. 8, lines 22-37).

Conclusion

Page 7

Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Alicia Baturay whose telephone number is (571) 272-3981. The examiner

can normally be reached at 7:30am - 5pm, Monday - Thursday, and every other Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Hosain Alam can be reached on (571) 272-3978. The fax phone number for the organization

where this application or proceeding is assigned is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application

Information Retrieval (PAIR) system. Status information for published applications may be

obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
